TAKE A "BEFORE" PHOTO OF YOUR TRIM

- Wash and dry surface thoroughly, using a non-wax containing detergent such as blue Dawn® dish soap.
- **IMPORTANT:** Must be applied to a completely dry surface. Ideal environmental conditions for application are between 60° F (15° C) and 75° F (24° C).
- **TIP:** Open and close doors, trunk, and hood several times to free any trapped water. If product comes in contact with paint or glass, remove immediately with a clean dry cloth.
- Wearing provided gloves, open one (1) pack and wipe trim surface in overlapping passes to ensure full coverage.
- Rotate wipe as needed, ensuring you use all the surfaces of the wipe. Move to a new pack when wipe becomes dry or soiled.
- After application, allow a minimum of 1 hour before driving and 24 hours before exposing to moisture.

PRO TIP

Immediately leveling the coating with a microfiber cloth can help prevent high spots and streaking when the coating cures.
